DETAILED ACTION

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the each of the work tools specified in claim 11 must be shown or the feature(s) canceled from the claim. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Application/Control Number: 10/761,856

Art Unit: 3747

Claims 1-8, 10, 11 and 13-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims have limitations with insufficient antecedent basis such that it is not clear what they are intended to refer to, such as "the motor shaft" (claim 1, line 5; claim 13, lines 3-4), "the axle" (claim 1, lines 15, 18; claim 13, lines 9, 12), "the two opposite ends of the shafts" (claim 3, line 4; claim 14, line 4), "the drum shaft" (claim 3, line 5; claim 14, line 5), "the entire length" (claim 4, line 3; claim 15, line 2), and "the axle of the pulley" (claim 18, line 5). Regarding claim 11, the phrase "or the like" renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 7, 10, 13-16 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawasaki et al (US 2001/0047786 A1). The starter has a rope reel 21 and pulley 31, which is rotatable by way of spring coupling element 15. A sleeve, as claimed, is defined by the cylindrical portions of rope reel 21 and pulley 31 surrounding axle 12.

Application/Control Number: 10/761,856

Art Unit: 3747

Claims 1-5, 7, 11, 13-16 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Leasure et al (US 6,782,863 B2). Claims embrace at least the recoil starter embodiment shown in Figure 10, which includes a rope pulley 86, an engaging element 90 with a sleeve portion, and a spring coupling element 88.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawasaki et al (US 2001/0047786 A1) in view of Forbess (US 2,511,908). Kawasaki et al discloses the claimed invention as stated above except for hardened metal. Forbess teaches that it is known to use hardened components in a recoil starter (column 2, line 27; column 3, line 6). It would have been obvious to one having ordinary skill in the art at the time the invention was made to construct the recoil starter of Kawasaki et al of hardened components, as taught by Forbess, in order to make the starter more durable.

Claims 8 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawasaki et al (US 2001/0047786 A1) in view of Uhl (US 5,287,832). Kawasaki et al discloses the claimed invention as stated above except that the spring coupling element is not expressly disclosed as being pretensioned (claim 18). Uhl teaches that it is known to pretension a spring coupling element. It would have been obvious to one having ordinary skill in the art at the time

Art Unit: 3747

the invention was made to pretension the spring coupling element, as taught by Uhl, in the

starter of Kawasaki et al in order to apply desired torque from the rope reel to the pulley.

Response to Arguments

Applicant's arguments have been fully considered but they are not persuasive. Leasure

et al describes cylindrical portions surrounding the axle as "sleeves" (e.g. column 3, lines 49-

56). This is sufficient to read on the structure claimed.

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Andrew M. Dolinar whose telephone number is (571) 272-4840. The

examiner can normally be reached on Mon. - Thu. 7:45 - 6:15.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Henry Yuen can be reached on (571) 272-4856. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private

PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
